

Cisco Meraki offers an extensive portfolio of IT and networking solutions to digitally transform your business.

100% cloud managed, Cisco Meraki boasts a comprehensive family of solutions covering all of your network infrastructure and security needs.

Why choose Meraki?

Simplicity

Meraki devices can be pulled out of the box, plugged in anywhere and be ready to go in minutes.

Security

Meraki protects your network from the latest vulnerabilities and security threats, so you can keep your users safe and secure, wherever they are.

Intelligence

An intuitive dashboard gives you complete network visibility so you can make data-based decisions.

How Meraki can help your business

The heart of your digital transformation

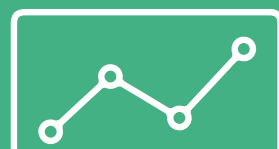

High capacity WiFi with automatic RF optimisation

Powerful switches for intent based networking

SD WAN with secure auto VPN and threat intelligence

Meraki Insight for speedy network issue response

Systems Manager to centrally provision, monitor and secure endpoints

Intelligent smart cameras with fully loaded features

Easy installation and migration

A major factor in Meraki's success is its usability. The fact that it operates on the cloud means that Meraki can be up and running on a network in short order, with simple implementations ready in as little as 30 minutes.

Robust security features

- Anti-virus and anti-phishing systems
- Advanced malware detection
- Content filtering abilities
- Automatic intrusion prevention
- Enhanced firewall security tools

Single dashboard with extensive features

One of the biggest draws to using Cisco Meraki is the way it allows businesses to manage their whole network from one centralised dashboard. From this dashboard you can:

- Monitor traffic to identify issues that are causing the network to slow down
- Create restrictions that stop the network becoming overloaded
- Control firewalls and switches
- Gain remote access to endpoints and devices such as security cameras
- Roll out a single SSID across all wireless access points on the network with one click
- Implement Single Sign On (SSO) to boost efficiency
- Perform licensing and updating on any and all wireless access points without the need for individual administrator access

Supports your remote workforce

Increased productivity with access from any device to any cloud

Creation of virtual environments to ensure a united workforce

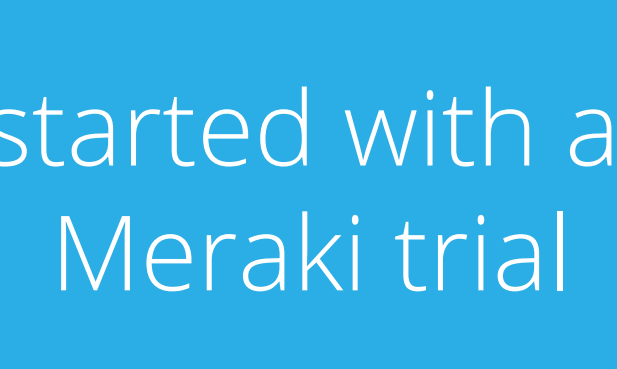

Remote management wherever your team is based

Secure network access and device specific policies easily changed
